

Rehabilitation Assistants

Health care practitioners and case managers have often queried how best to serve clients who require significantly more expertise than an attendant care provider can offer, but who do not require the training and experience of a Rehabilitation Therapist. "Rehabilitation Assistants" are Brainworks' answer to this long-time dilemma.

Brainworks' Rehabilitation Assistants provide one-to-one support, supervision and professional companionship to clients of all ages with varying levels of ability and disability. Rehabilitation Assistants are available to work wherever is required: In the home, school, work site, hospital, rest home, and any other locations as appropriate.

Rehabilitation Assistants follow clear direction from treating professionals regarding their specific role and purpose with any client. They complete feedback keys provided by the treatment team and submit them to the team on a weekly basis. Additional telephone and/or written updates are provided at the discretion of the treating professionals. Rehabilitation Assistants do not complete formal reports. Brainworks provides administrative supervision and support to all its employees, including Rehabilitation Assistants.

Brainworks' Rehabilitation Assistants are all employees who have successfully passed a rigorous hiring process. While they have varying educational backgrounds, they all have experience working with people with disabilities, and have demonstrated the ability to provide support from a client-centred perspective.
